We have a test task for you !
We appreciate your time and interest.

Pokedex

Using the open pokemon API (https://pokeapi.co) develop us a pokedex with following Functionalities

1. List pokemons in a table view with their avatar, color, type and their attributes with customizable pagination
2. Filter the pokemons with a search box
3. A category tag that can filter out types of the pokemons
4. Details page for info

Technologies that needs to use:
1. React.js
2. Typescript
3. SCSS
4. Redux or Context

Example of Pokedex: (https://pokedex-ednoram.vercel.app)
